Page 2 of 11 | 21 December 2021

English translation prepared by DIBt

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

#### **Specific Part**

#### 1 Technical description of the product

The Nail Anchor N is a fastener made of galvanized or stainless steel which is placed into a drilled hole and expanded by loading.

The product description is given in Annex A.

## 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

### 3.1 Safety in case of fire (BWR 2)

| Essential characteristic Performance |              |
|--------------------------------------|--------------|
| Reaction to fire                     | Class A1     |
| Resistance to fire                   | See Annex C2 |

### 3.2 Safety in use (BWR 4)

| Essential characteristic                                                                     | Performance         |
|----------------------------------------------------------------------------------------------|---------------------|
| Characteristic resistance for all load directions and modes of failure for simplified design | See Annex B2 and C1 |
| Durability                                                                                   | See Annex B1        |

# 4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with European Assessment Document EAD No. 330747-00-0601, the applicable European legal act is: [97/161/EC].

The system to be applied is: 2+

Z119944.21 8.06.01-370/21

| Compacted, reinforced or unreinforced normal weight concrete, without fibres according to EN 206:2013 + A1:2016 | <b>✓</b>           |                        |                         |                        |                    |  |

| Use conditions (environmental conditions):                                                                                                                                                                                    | Effective anchorage depth                                |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------|
| Structures subject to dry internal conditions     (zinc plated steel, stainless steel or high corrosion resistant steel)                                                                                                      | h <sub>ef</sub> ≥ 30mm and<br>h <sub>ef,red</sub> ≥ 25mm |
| Structures subject to permanently damp internal conditions, if no particular aggressive conditions exist (stainless steel or high corrosion resistant steel)                                                                  | h <sub>ef</sub> ≥ 30mm and<br>h <sub>ef,red</sub> ≥ 25mm |
| <ul> <li>Structures subject to external atmospheric exposure including industrial and marine<br/>environment, if no particular aggressive conditions exist<br/>(stainless steel or high corrosion resistant steel)</li> </ul> | h <sub>ef</sub> ≥ 30mm                                   |
| Structures subject to external atmospheric exposure and to permanently damp internal conditions, if other particular aggressive conditions exist (high corrosion resistant steel)                                             | h <sub>ef</sub> ≥ 30mm                                   |

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used.)

#### Design:

- Fastenings are designed under the responsibility of an engineer experienced in fastenings and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be fastened. The
  position of the fastener is indicated on the design drawings (e.g. position of the fastener relative to
  reinforcement or to supports, etc.).
- Design of fastenings according to EN 1992-4:2018, simplified design method C
- Fasteners are only to be used for redundant non-structural systems.

#### Installation:

- Drill hole by hammer drilling or vacuum drilling.
- Installation only as supplied by the manufacturer, without replacement of individual parts.
- Fastener installation such that the effective setting depth is complied with. This compliance is ensured, if the admissible thickness of fixture is kept or the loop of Nail Anchor N-O rests on the concrete surface.

<sup>1)</sup> A fixing point is defined as:

- Single fastener
- $\bullet$  Fastener group with a minimum spacing s of 50 mm  $\leq$  s <  $s_{\text{cr}}$

If the spacing in a fixing point is greater than or equal to the respective spacing in this table, the characteristic resistances apply to every single fastener.

<sup>1)</sup> A fixing point is defined as:

- Single fastener,
- Fastener group with a minimum spacing s of 50 mm ≤ s < s<sub>cr</sub>

If the spacing in a fixing point is greater than or equal to the respective spacing in this table, the characteristic resistances apply to every single fastener

<sup>&</sup>lt;sup>3)</sup> Only in connection with threaded rods M8, M10 or M12 minimum strength class 5.8.
